

# ANNEX O: IRA for ASRH

This is a tool referenced in [Table 6](#) in Chapter 7: Data for Action. An initial rapid assessment (IRA) is conducted during the first 72 hours of an acute emergency and is used to collect demographic information and identify life-saving issues that must be addressed urgently to ensure the well-being of the beneficiary population. This sample IRA for cannot be used as a standalone tool but provides an overview of the ASRH data that should be collected and can be used as a complementary tool to other rapid assessment formats.

<b>Initial Rapid Assessment for Adolescent Sexual and Reproductive Health</b>		
<b>Number of adolescents (10–14 years), disaggregated by males &amp; females</b>	[females]	[males]
<b>Number of adolescents (15–19 years), disaggregated by males &amp; females</b>	[females]	[males]
